K. Saranya	IT23605848
Wazna M J M	IT23587960

1. Executive Summary

CareCircle is a proposed **Community Mental Health Peer Support Network** designed to provide an integrated digital platform for supporting users' mental health and overall wellbeing.

The platform combines personal wellbeing management, goal setting, peer support, session scheduling, mental-health resources, and crisis-support information within one connected system. Instead of requiring users to depend on several separate applications, CareCircle brings these related services together in a single platform.

The system provides five major individual component areas:

1. Goal Setting & Progress Tracking
2. Peer Support Chat & Community Forum
3. Peer Matching & Scheduling System
4. Mood & Wellbeing Tracker
5. Resource Library & Crisis Support Directory

CareCircle is intended to support community members, patients, peer supporters, mental-health professionals, families and caregivers, NGOs, government health authorities, and system administrators.

The project is aligned with **SDG 03 – Good Health and Well-being** by encouraging users to monitor their wellbeing, establish positive goals, connect with supportive communities, access reliable mental-health information, and locate appropriate support services.

2. Project Background

Mental wellbeing can be influenced by emotional experiences, personal habits, social relationships, personal goals, and access to appropriate support. Individuals may require different forms of support depending on their needs.

Some users may want to understand their mood patterns, maintain a journal, establish personal wellbeing goals, or monitor their progress. Others may require peer interaction, support sessions, educational resources, or information about nearby mental-health services.

CareCircle addresses these needs through a unified digital platform.

The system combines personal wellbeing management with community-based peer support, session management, educational resources, and crisis-support information. This creates a connected environment where users can manage their wellbeing while also accessing social and informational support.

The project is aligned with **SDG 03 – Good Health and Well-being** and focuses on creating a more accessible, connected, and user-centered approach to community mental-health support.

3. Project Vision

The vision of CareCircle is to create a supportive and user-friendly digital environment where individuals can manage their wellbeing, connect with others, and access appropriate mental-health support.

CareCircle aims to allow users to:

- Monitor their mood and wellbeing.
- Maintain personal journal entries.
- Set personal mental-health and wellbeing goals.
- Track goal progress and achievements.
- Record daily wellness activities.
- Participate in community discussions.
- Communicate through peer-support chat rooms.
- Find and schedule suitable peer-support sessions.
- Manage scheduled sessions and availability.
- Access reliable mental-health resources.
- Search and filter relevant information.
- Discover nearby support services.
- Access emergency and crisis-support information.
- Receive relevant reminders and personalized recommendations.

The platform is designed as an integrated ecosystem rather than a collection of unrelated features.

4. Target Users and Stakeholders

CareCircle involves several user groups and stakeholders.

4.1 Community Members

Community members can use the platform to monitor their wellbeing, establish personal goals, participate in community discussions, communicate with peers, access resources, and find appropriate support.

4.2 Patients

Patients can use relevant wellbeing, goal-management, peer-support, resource, and support-service features available through the platform.

4.3 Peer Supporters

Peer supporters can participate in peer-support communities and provide or participate in support sessions according to their assigned role and permissions.

4.4 Mental Health Professionals

Mental-health professionals are stakeholders within the wider support ecosystem and may be involved in providing or supporting appropriate mental-health services.

4.5 Families and Caregiver

Families and caregivers can benefit from appropriate mental-health information, support resources, and service information.

4.6 NGOs

Non-governmental organizations can contribute to or be connected with mental-health resources and support services.

4.7 Government Health Authorities

Government health authorities are relevant stakeholders within the wider community mental-health support ecosystem.

4.8 System Administrators

Administrators are responsible for managing system-controlled information, particularly mental-health resources and crisis-support directory entries.

5. Individual Component Overview

CareCircle consists of five individual component areas assigned among the group members.

Member	Individual Component
Afra S H F – IT23587892	Goal Setting & Progress Tracking
H M D Guwan Dehigasthenna – IT23847262	Peer Support Chat & Community Forum
J L K S D Jayawardhana – IT23551848	Peer Matching & Scheduling System
K. Saranya – IT23605848	Mood & Wellbeing Tracker
Wazna M J M – IT23587960	Resource Library & Crisis Support Directory

Each component contributes a distinct part of the overall CareCircle experience while remaining connected to the other components.

6. Goal Setting & Progress Tracking

6.1 Component Overview

The Goal Setting & Progress Tracking component enables users to create personal mental-health and wellbeing goals and monitor their progress over time.

The component focuses on helping users move from identifying personal objectives to actively tracking their progress and recognizing achievements.

6.2 Core Features

Users can:

- Create personal mental-health goals.
- View existing goals.
- Update goal details.
- Delete goals.
- Set goal targets.
- Track goal progress.
- Update goal completion status.
- Manage goal reminders.
- Record achievements and milestones.
- Monitor overall progress.

6.3 Goal Management

Users can create goals according to their personal wellbeing objectives. Existing goals can be viewed, updated, or deleted when necessary.

6.4 Goal Targets and Progress

Users can define targets for their goals and monitor progress towards those targets. This allows progress to be represented over time rather than simply recording whether a goal exists.

6.5 Completion and Achievements

Users can update the completion status of their goals and record achievements or milestones reached during their progress.

6.6 Reminders

Goal reminders can help users remain aware of their planned wellbeing activities and objectives.

6.7 Component Value

This component provides a structured approach to personal development by connecting goals, targets, progress, completion, reminders, and achievements within the user's wellbeing journey.

7. Peer Support Chat & Community Forum

7.1 Component Overview

The Peer Support Chat & Community Forum component provides users with opportunities to communicate with others, participate in discussions, and engage in peer-support communities.

The component combines structured community discussions with real-time peer communication.

7.2 Community Forum Features

Users can:

- Create community forum posts.
- View forum posts.
- Update forum posts.
- Delete forum posts.

7.3 Peer Support Chat

Users can:

- Join peer-support chat rooms.
- Send real-time chat messages.
- Edit chat messages.
- Delete chat messages.

7.4 Discussion Search

Users can search discussion threads to find conversations relevant to their interests or support needs.

7.5 Topic Filtering

Discussion threads can be filtered according to mental-health topics, allowing users to locate discussions that are relevant to specific areas of interest.

7.6 Component Value

This component provides the social and community dimension of CareCircle. It enables users to move beyond individual wellbeing management and engage with peer-support communities in a structured environment.

8. Peer Matching & Scheduling System

8.1 Component Overview

The Peer Matching & Scheduling System enables users to arrange peer-support sessions and manage appointments with appropriate support opportunities.

The component focuses on making peer-support sessions easier to discover, schedule, manage, and review.

8.2 Session Booking

Users can:

- Create session bookings.
- View upcoming sessions.
- View past sessions.
- Reschedule sessions.
- Cancel scheduled sessions.

8.3 Availability Management

Users can edit availability slots to support the session scheduling process.

8.4 Calendar Integration

The system integrates availability with a calendar to support session planning and scheduling.

8.5 Automated Reminders

Users can receive automated reminder notifications for scheduled peer-support sessions.

8.6 Session Feedback

After completing a session, users can submit feedback about their experience.

8.7 Session Ratings

Users can rate completed sessions, providing a way to evaluate their peer-support experience.

8.8 Component Value

This component connects users with peer-support opportunities and provides the scheduling functionality required to turn peer interaction into organized support sessions.

9. Mood & Wellbeing Tracker

9.1 Component Overview

The Mood & Wellbeing Tracker enables users to record, review, and manage information related to their emotional wellbeing and daily wellness activities.

It provides users with a way to identify patterns and monitor changes in their wellbeing over time.

9.2 Mood Management

Users can:

- Create mood entries.
- View mood entries.
- Update mood entries.
- Delete mood entries.

9.3 Journal Management

Users can:

- Create journal entries.
- View journal entries.
- Update journal entries.
- Delete journal entries.

9.4 Wellness Activity Management

Users can:

- Create wellness activity records.
- View wellness activity records.
- Update wellness activity records.
- Delete wellness activity records.

9.5 Wellbeing Goals

Users can:

- Create wellbeing goals.
- View wellbeing goals.
- Update wellbeing goals.
- Delete wellbeing goals.

The wellbeing goals within this component represent wellbeing-related records specified for the tracker, while the dedicated Goal Setting & Progress Tracking component provides more structured goal-target and progress-management functionality.

9.6 Mood History

The system allows users to review their previous mood records and identify changes over time.

9.7 Wellbeing Trends

Users can monitor wellbeing trends based on information recorded through the tracker.

9.8 Daily Wellness Activities

Users can log daily wellness activities as part of their personal wellbeing records.

9.9 Mood Reports

Users can export mood reports based on their recorded information.

9.10 Reminder Notifications

The system provides reminder notifications to support continued engagement with wellbeing tracking.

9.11 Personalized Recommendations

The tracker provides personalized wellbeing recommendations as specified in the project requirements.

9.12 Component Value

The Mood & Wellbeing Tracker forms the personal monitoring layer of CareCircle, allowing users to record their experiences and review their wellbeing over time.

10. Resource Library & Crisis Support Directory

10.1 Component Overview

The Resource Library & Crisis Support Directory provides users with access to mental-health information, educational materials, support-service information, and emergency contacts.

This component consists of two closely related areas:

1. Mental Health Resource Library
2. Crisis Support Directory

10.2 Mental Health Resource Library

The Resource Library provides users with access to mental-health-related educational and self-help information.

Resource Management

Administrators can:

- Create mental-health resources.
- Update mental-health resources.
- Delete mental-health resources.

Resource Discovery

Users can:

- View mental-health resources.
- Search mental-health resources.
- Filter resources by category, topic, or type.

Resource Interaction

Users can:

- Bookmark favourite resources.
- Rate resources.
- Review resources.
- Share resources with others.

Resource Recommendations

Users can receive personalized resource recommendations.

Resource Types

The platform provides access to:

- Articles.
- Videos.
- Self-help guides.

10.3 Crisis Support Directory

The Crisis Support Directory provides users with information about nearby support services and emergency assistance.

Users can:

- View nearby hospitals.
- View nearby counselors.
- View nearby mental-health organizations.
- View emergency helpline contact details.
- Get directions to nearby support services.

- Access the “**Help Now**” emergency assistance feature.
- Save frequently used crisis-support contacts.

Crisis Directory Administration

Administrators can:

- Add crisis-support directory entries.
- Update crisis-support directory entries.
- Delete crisis-support directory entries.

10.4 Component Value

This component provides the information and support-service layer of CareCircle. It allows users to access educational material when they need information and locate appropriate support services when additional assistance is required.

11. Overall System Architecture Concept

At a conceptual level, CareCircle can be viewed as five connected functional areas:

Personal Wellbeing

- Mood & Wellbeing Tracker
- Goal Setting & Progress Tracking

Social Support

- Peer Support Chat
- Community Forum

Peer Services

- Peer Matching
- Session Scheduling

Information Support

- Mental Health Resource Library

Emergency & External Support

- Crisis Support Directory

These areas work together to provide a complete community mental-health support experience.

12. Integration Between Components

A major strength of CareCircle is the relationship between its individual components.

12.1 Mood & Wellbeing → Goals → Progress

A user can record mood and wellbeing information through the Mood & Wellbeing Tracker, identify personal objectives, create goals, and monitor progress through the Goal Setting & Progress Tracking component.

12.2 Goals → Reminders → Achievements

Users can establish targets, configure reminders, monitor progress, and record achievements or milestones as they work towards their goals.

12.3 Community → Peer Support → Scheduling

A user can discover or participate in peer-support discussions, communicate with peers, and proceed to arrange an appropriate peer-support session through the scheduling component.

12.4 Scheduling → Reminders → Feedback

After booking a session, the user can receive a reminder, attend the session, and provide feedback and a rating afterwards.

12.5 Wellbeing → Resources

Information recorded through the user's wellbeing activities can form part of the user's personalized experience, while the Resource Library provides access to relevant mental-health information and recommendations.

12.6 Resources → Support Services → Crisis Directory

A user can access educational resources and, when support-service information is required, use the Crisis Support Directory to find nearby hospitals, counselors, organizations, emergency contacts, and other specified support information.

These connections allow CareCircle to operate as a unified support ecosystem rather than five disconnected components.

13. Main User Journey

A typical CareCircle user journey can involve multiple interconnected components.

Step 1 – Monitor Wellbeing

The user records a mood or journal entry and may log a daily wellness activity.

Step 2 – Establish a Goal

The user identifies a personal wellbeing objective and creates a goal with an appropriate target.

Step 3 – Track Progress

The user monitors progress, updates completion status, and records achievements or milestones.

Step 4 – Engage with the Community

The user can participate in community discussions, search for relevant topics, or join peer-support chat rooms.

Step 5 – Arrange Peer Support

The user can identify an appropriate peer-support opportunity and create a session booking.

Step 6 – Manage the Session

The user can view the upcoming session, receive a reminder, reschedule or cancel when necessary, and manage relevant availability.

Step 7 – Provide Feedback

After completing the session, the user can provide feedback and rate the session.

Step 8 – Access Mental-Health Resources

The user can search and filter resources, read articles, watch videos, access self-help guides, bookmark useful resources, and receive personalized recommendations.

Step 9 – Access Support Services

When additional support information is required, the user can access nearby service information, emergency contacts, directions, saved contacts, and the specified “Help Now” feature.

This journey demonstrates how the individual components contribute to one connected user experience.

14. Notifications

Notifications are a supporting capability across CareCircle.

The system includes reminder functionality for relevant activities, including:

- Goal reminders.
- Mood and wellbeing reminders.
- Peer-support session reminders.

Automated session reminders can help users remain aware of upcoming appointments, while goal and wellbeing reminders can encourage continued engagement with personal tracking and goal-related activities.

15. Personalization

CareCircle includes personalized functionality in multiple areas.

The Mood & Wellbeing Tracker provides **personalized wellbeing recommendations**, while the Resource Library provides **personalized resource recommendations**.

These capabilities contribute to a more individualized user experience by helping users access information and recommendations relevant to their recorded wellbeing activities and use of the platform.

16. Administration

Administrative functionality is required for managing system-controlled information.

16.1 Resource Administration

Administrators can:

- Create mental-health resources.
- Update mental-health resources.
- Delete mental-health resources.

16.2 Crisis Directory Administration

Administrators can:

- Add crisis-support directory entries.
- Update crisis-support directory entries.
- Delete crisis-support directory entries.

Administrative responsibilities are separated from ordinary user functionality to maintain appropriate control over system-managed information.

17. Functional Requirements

17.1 Goal Setting & Progress Tracking

The system shall:

- Allow users to create, view, update, and delete personal mental-health goals.
- Allow users to set goal targets.
- Allow users to track goal progress.
- Allow users to update goal completion status.
- Support goal reminders.
- Allow users to record achievements and milestones.
- Allow users to monitor progress.

17.2 Peer Support Chat & Community Forum

The system shall:

- Allow users to create, view, update, and delete forum posts.
- Allow users to join peer-support chat rooms.
- Support real-time chat messaging.
- Allow users to edit and delete chat messages.
- Allow users to search discussion threads.
- Allow users to filter discussions by mental-health topics.

17.3 Peer Matching & Scheduling

The system shall:

- Allow users to create session bookings.
- Provide upcoming session views.
- Provide past session views.
- Allow availability slots to be edited.
- Allow sessions to be rescheduled.
- Allow scheduled sessions to be cancelled.
- Support calendar integration.
- Provide automated session reminders.
- Allow users to submit session feedback.
- Allow users to rate completed sessions.

17.4 Mood & Wellbeing Tracker

The system shall:

- Allow users to create, view, update, and delete mood entries.
- Allow users to create, view, update, and delete journal entries.
- Allow users to create, view, update, and delete wellness activity records.
- Allow users to create, view, update, and delete wellbeing goals.
- Track mood history.
- Monitor wellbeing trends.
- Support daily wellness activity logging.
- Allow users to export mood reports.
- Provide reminder notifications.
- Provide personalized wellbeing recommendations.

17.5 Resource Library

The system shall:

- Allow users to view mental-health resources.
- Allow users to search resources.
- Allow users to filter resources by category, topic, or type.
- Support resource bookmarks.
- Support resource ratings and reviews.
- Allow users to share resources.
- Provide personalized resource recommendations.
- Provide articles, videos, and self-help guides.
- Allow administrators to create, update, and delete resources.

17.6 Crisis Support Directory

The system shall:

- Provide information about nearby hospitals.
- Provide information about nearby counselors.
- Provide information about nearby mental-health organizations.
- Provide emergency helpline contact details.
- Provide directions to nearby support services.
- Provide the specified “Help Now” feature.
- Allow users to save frequently used crisis-support contacts.
- Allow administrators to add, update, and delete crisis-support directory entries.

18. User Experience Considerations

Because CareCircle is designed around mental-health and wellbeing support, the user experience should prioritize clarity, simplicity, consistency, and ease of navigation.

Users should be able to quickly identify the major areas of the platform:

- Mood & Wellbeing
- Goals & Progress
- Community
- Peer Support Sessions
- Resources
- Crisis Support

The interface should maintain a clear distinction between personal wellbeing information, community interactions, scheduled support sessions, informational resources, and emergency-support functionality.

Frequently used functions should be easy to locate, while sensitive information should be presented in an appropriate and understandable manner.

19. Non-Functional Considerations

The following considerations support the design of the CareCircle platform.

19.1 Usability

The system should be easy to understand and navigate so that users can access relevant functionality without unnecessary complexity.

19.2 Accessibility

The interface should aim to accommodate users with different levels of digital experience and accessibility needs.

19.3 Performance

Features such as chat, community discussions, search, tracking, and session management should respond appropriately to user actions.

19.4 Reliability

User records, goals, bookings, resources, and other system information should be handled consistently.

19.5 Privacy

Personal wellbeing information, journal records, and user-generated community content should be treated as sensitive information and handled appropriately.

19.6 Security

Appropriate authentication, authorization, and access controls should be considered when implementing personal, administrative, and community functionality.

Note: These are design considerations for the proposed system and should not be interpreted as additional explicit requirements beyond the supplied project requirements.

20. Competitive Applications

The project identifies the following competitive mobile applications:

- Cups
- BetterHelp
- TalkLife
- MindShift CBT

These applications provide reference points for understanding existing approaches to mental-health support, peer interaction, and wellbeing-related digital services.

CareCircle's proposed scope differentiates itself by combining:

- Mood and wellbeing tracking
- Goal setting and progress tracking
- Peer-support communication
- Peer-support scheduling
- Mental-health resources
- Crisis-support information

within one community-focused platform.

21. Expected Benefits

21.1 For Community Members

Community members can access multiple wellbeing and support capabilities through a single platform.

21.2 For Users Monitoring Their Wellbeing

Users can maintain mood and journal records, track wellness activities, monitor trends, and manage personal goals.

21.3 For Users Seeking Peer Support

Users can participate in discussions, communicate through peer-support chat rooms, and arrange peer-support sessions.

21.4 For Peer Supporters

The system provides community and session-related functionality that supports interaction with users.

21.5 For Users Seeking Information

Users can search, filter, bookmark, review, and share mental-health resources.

21.6 For Users Seeking Support Services

Users can locate nearby support services and access emergency contact information through the Crisis Support Directory.

21.7 For the Wider Community

CareCircle provides a centralized digital environment that connects personal wellbeing management, social support, information access, and support-service discovery.

22. Overall System Scope

The proposed CareCircle system covers:

Personal Wellbeing

- Mood tracking
- Journal management
- Wellness activity tracking
- Mood history
- Wellbeing trend monitoring
- Mood reports
- Personalized wellbeing recommendations

Goal Management

- Personal mental-health goals
- Goal targets
- Goal progress
- Completion status

- Goal reminders
- Achievements and milestones

Community

- Community forum
- Forum post management
- Peer-support chat rooms
- Real-time messaging
- Message management
- Discussion search
- Topic filtering

Peer Support Sessions

- Session booking
- Upcoming sessions
- Past sessions
- Availability management
- Rescheduling
- Cancellation
- Calendar integration
- Session reminders
- Feedback
- Ratings

Mental-Health Resources

- Resource management
- Resource search
- Resource filtering
- Bookmarks
- Ratings and reviews
- Resource sharing
- Personalized recommendations
- Articles
- Videos
- Self-help guides

Crisis Support

- Nearby hospitals
- Nearby counselors
- Nearby mental-health organizations
- Emergency helpline information
- Directions

- “Help Now” functionality
- Saved crisis contacts
- Crisis-directory administration

These capabilities collectively represent the scope defined for the CareCircle project.

23. Feature Integration Summary

The five components can be understood as interconnected layers of the CareCircle platform:

Mood & Wellbeing Tracker

Provides personal wellbeing information

Goal Setting & Progress Tracking

Transforms personal objectives into trackable goals

Peer Support Chat & Community Forum

Provides social and peer interaction

Peer Matching & Scheduling System

Converts peer-support opportunities into organized sessions

Resource Library & Crisis Support Directory

Provides informational, support-service, and emergency-support access

Together, these components provide a complete user journey from **self-monitoring** → **goal development** → **social connection** → **peer support** → **information access** → **support-service discovery**.

24. Future Development

The supplied project requirements do not define a specific future-development roadmap.

Therefore, future features should be determined through stakeholder feedback, usability evaluation, user research, and subsequent project decisions.

Any future functionality should be treated as a proposed enhancement rather than a confirmed project requirement unless formally approved by the project stakeholders.

25. Conclusion

CareCircle – **Community Mental Health Peer Support Network** is designed as an integrated digital platform that brings together personal wellbeing management, goal setting, peer interaction, peer-support scheduling, mental-health resources, and crisis-support information.

The **Mood & Wellbeing Tracker** allows users to record moods, maintain journals, track wellness activities, monitor trends, export reports, and receive personalized recommendations.

The **Goal Setting & Progress Tracking** component allows users to create personal objectives, define targets, monitor progress, manage reminders, update completion status, and record achievements and milestones.

The **Peer Support Chat & Community Forum** provides a space for users to create and participate in discussions, join peer-support chat rooms, exchange real-time messages, and search or filter discussions according to mental-health topics.

The **Peer Matching & Scheduling System** enables users to book, manage, reschedule, and cancel peer-support sessions while supporting availability management, calendar integration, reminders, feedback, and ratings.

The **Resource Library & Crisis Support Directory** provides access to mental-health resources such as articles, videos, and self-help guides while also allowing users to discover nearby hospitals, counselors, mental-health organizations, emergency contact information, directions, saved crisis contacts, and the specified “Help Now” feature.

The five components are not isolated from one another. Instead, they contribute to one connected user experience where wellbeing information can support goal development, community participation can lead to peer-support sessions, and resource discovery can connect users to appropriate support services.

Overall, CareCircle aims to provide a coherent, user-centred community mental-health support ecosystem aligned with **SDG 03 – Good Health and Well-being**. The project brings together the five group members' components into one unified platform designed to support personal wellbeing, social connection, peer support, information access, and access to relevant support services.
